

Panther TLSL 464

Quad Control TLSO

The Panther TLSL spinal brace delivers maximum spinal control. The posterior-lateral shell, rigid anterior plate, and twin lateral plates overlap to provide circumferential support & control.

With its choice of pectoral pads or sternal plate and attached shoulder straps, the Panther TLSL offers triplanar control from the symphysis pubis to the sternum anteriorly and from the gluteal fold to the scapular spines posteriorly.

The string-and-pulley compression system allows for easy cinching, even by elderly arthritic hands.

The Panther TLSL is universal. It requires no tools to fit. There's no need to cut or fold a belt. Just add or remove belt segments.

PDAC Approved: L0464
